DURST WORKFLOW VANGUARD EDITION

From data preparation to printing.

Durst Workflow Vanguard Edition is a browser-based software solution to run your entire PDF workflow in a manual or fully automated way.

Print data is uploaded, pre-flighted and processed. Jobs are immediately ready to be sent to the printer. Wide format dedicated rule-based and pre-configured corrections are available for data preparation.

These can be used to correct around 90% of typical errors, as well as to add production additions. When the print data is print-ready, Durst Workflow not only creates effective nesting, but even utilizes cut path information and creates a true shape nesting which optimizes media usage and will maximize the output of your Vanguard printer. The job can then be rendered to the printer with outstanding color accuracy and ripping speed.

Improve your prepress productivity

- > Powerful Preflight
- > Data correction

Handle your printing data

- > Print job management
- > Imposer
- > Last minute corrections
- > Status tracking

Achieve outstanding color accuracy

- > Profiling/Re-Profiling
- > Brand/spot/customer colors
- > Gamut verification
- > Color matching

Enhance your print data handling

- > Print data preparation
- > Versioning
- > Parallel working of prepress and production in one tool
- > Advanced multipage PDF interpretation

Optimize material usage

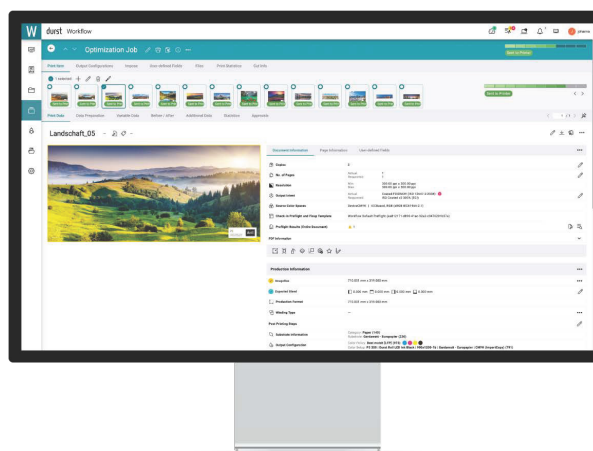

- > Substrate saving
- > Option: Ink saving

Optimize your ripping speed

- > Parallel ripping
- > Render satellite

Automate your processes

- > Imposition templates
- > Output templates
- > Option: ERP/MIS integration
